

# B11 Control

The B11 Hand Control is designed to operate independently or as an integrated system connected to a Heavy Duty Accelerator Pedal, these hand controls are adaptable to a range of functions. Combined with our cable, they offer an extremely smooth system with excellent operator feedback.

## KEY FEATURES

- Rugged Construction – these hand controls are designed to perform smoothly under harsh environments typical to construction equipment and specialty vehicles.
- Adaptability – the B0011 can serve a wide range of purposes, including power take-off applications, throttle controls, mechanical shifting controls, or basic on-off functions.
